## Planning to meet future electricity needs

May 2026

### Class Environmental Assessment for Municipal Transformer Station #2 in Cambridge

In response to an urgent need to meet the growing demand for electricity in the communities we serve, GrandBridge Energy is initiating a Class Environmental Assessment (Class EA) for a proposed municipal transformer station at 195 Boychuk Drive in the City of Cambridge. The new 115/27.6 kV transformer station will include high-voltage electrical equipment to provide safe, reliable electricity to industrial, commercial and residential customers. **Please refer to the map on the reverse side of this page.**

### Planning Process

Avoiding and minimizing the potential environmental impact of this project is important to us. The planning and development of this project will comply with the Class Environmental Assessment for Transmission Facilities (Class EA for TF) under the Ontario Environmental Assessment Act. This streamlined process ensures that smaller transmission facility projects with a known range of effects are planned and executed in an efficient and environmentally responsible manner.

Within the Class EA for TF, there are two levels of assessment associated with the size of the project and potential environmental effects. These include a Screening Process and Full Class EA. This type of project is anticipated to follow the Screening Process.

Once the Class EA for TF process is successfully completed, other environmental permits and approvals will be required. Construction of the station could start as early as the first quarter of 2027, with an anticipated in-service date of 2028.

### We Want to Hear from You

Your input is important to us. Feedback from interested and potentially impacted Indigenous communities, residents, businesses and government agencies is part of the planning process. Please visit [grandbridgeenergy.com/mts](https://grandbridgeenergy.com/mts) to provide feedback, view the planning process and stay updated on the project.
