Waterloo Crt Underground Work

What's Happening on Your Street

Anticipated Monday, November 23 to Friday, December 4, 2026 • 82–94 Waterloo Crt

Your home is currently supplied by overhead wires that run through the backyards on Waterloo Crt. To improve reliability, we will be relocating your electricity supply to the **front** of your property, using new underground cables beneath the sidewalk. This project will be completed in two phases. This letter covers **Phase 1**, the underground work within the municipal right-of-way taking place this year.

Phase 1: This year's work

Crews will be working along the sidewalk in front of 82–94 Waterloo Crt to:

- Temporarily remove the sidewalk
- Install new underground pipes beneath the sidewalk, extending to your property line in preparation for next year's work (Phase 2)
- Install a new underground connection box in the sidewalk in front of 88 Waterloo Crt
- Restore the sidewalk and repair any areas disturbed by the work once it is complete

Phase 2: Next year

Install new poles and overhead transformers on Waterloo St, install new underground cables, upgrade meter bases at each home, connect homes to the new electrical supply and remove the existing rear-yard powerlines.

We will send you a separate letter before Phase 2 begins.

Sidewalk work and new underground pipes

New connection box (in sidewalk at 88 Waterloo Crt)

Locations are approximate.

What this means for you

- **Please do not park on Waterloo Crt while construction is under way.** Crews need the road clear for trucks and equipment.
- **No power outages are expected** during Phase 1 of the project. Your electricity service will not change this year.
- The sidewalk in front of 82–94 Waterloo Crt will be closed during the work. Please follow posted signs and use caution.
- Access to the walkway to your home will be maintained throughout the work.
